ARMSTRONG POWER SYSTEMS

Reliability...a key ingredient on all our products

Reliability and quality is something that we take very serious at ARMSTRONG POWER.

Because we understand that our products are key elements for our customers operations, we have been always directing all of our efforts on making products that keep our tradition and compromise with the quality.

As a part of our company evolution, we are starting a new platform where our customer can get as much information they need from our products.

Today's life, has make the information, an essential ingredient on every business.

We are professionals on what we do

or you can ask to your closest dealer for updates.

Thank you form making of Armstrong Power your election for your power needs.

If you have any question about the information you are receiving on this catalog you can send us an e-mail to:

support@armstrongpower.com

Or contact your closest dealer.

Thru the pages of this catalog you will receive information on all the accessories available for Kubota series products.

All the accessories are based on the current specifications we have.

Any change to that information will be updated on our global information system

Air, oil and Fuel Filters

Keep your engine intake clean. Our Filtration systems providers have engineering teams constantly striving to improve their products.

The result? Superior-quality air filtration from high-capacity, high-efficiency air filters and innovative product technologies.

Fuel and oil filtration systems offers

customers optimum protection for their fuel systems and reduced operating costs .

Jacket Water Heater and oil heaters

Below zero temperatures may cause damage to your engine if you don't follow the owners manual properly. To keep your equipment running on those weathers you need a jacket water heater. Don't leave that the winter stop your Armstrong Power Generator. Consult with your dealer if you may need an oil heater also.

Fuel/Water Separator

The filter is intended for installation between the fuel tank and engine. Water and other impurities are collected in the transparent bowl where they can be drained off by means of a drain valve. This filter will give a longer live to your power generator engine.

Auxiliary Fuel Pump

The auxiliary fuel pump can be used on applications where you need to take the fuel from a main tank to an auxiliary tank like a day tanks.

UL Sub-Base fuel tank

In the case your local government request from you UL listed fuel tanks e have UL certifications for fuel tanks

Battery charger

Guest 6 amp fully automatic battery charger is designed to recharge 12 volt battery batteries for a total of 6 amps of charge current. This will ensure that your battery will be always ready to start your generator whenever you need it.

Circuit Breakers

Armstrong Power offer the best solution for rapidly restoring normal electrical service after a fault and, at the same time, offering the maximum protection of the electrical installation .

Automatic Transfer Switches

The only proper and most safe way to run a generator is with a transfer switch. These switches should only be installed by an electrician. Transfer switches have three selections. Generator...center off...and utility. It prevents you from having

the generator and the utility power on at the same time., which would damage the wiring in your home or business. When installed properly will prevent a backfeed to the utility lines which could prove fatal to linemen working.

Spring Vibration Isolators

With the vibration isolators kit (set of 4) you will reduce the vibration produces by the equipment and will protect also the equipment against damages due to vibration.
